Product Edit

When you start the first-day none of these products will be in the system for your business, the user will be displayed with product management screen where you will see product name if barcode does exist in the system. The user only needs to enter their cost and price as these values are different for each business we need to set this information. Once setup complete for this product you will not see screen next day on.
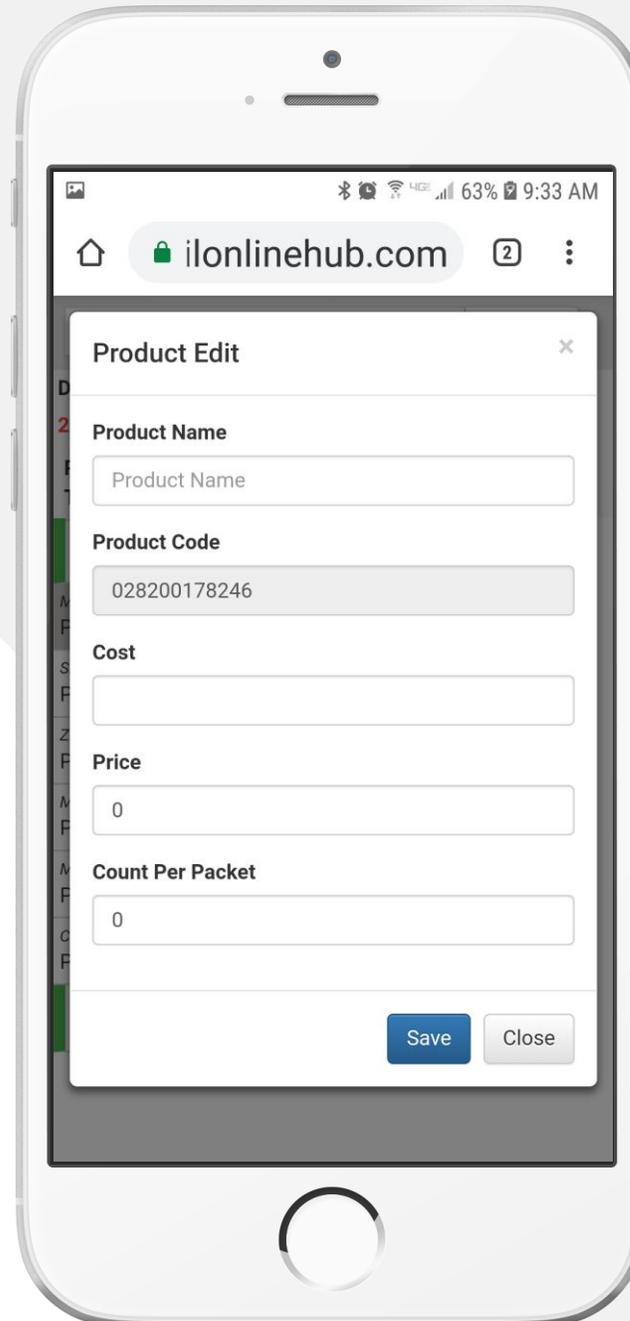

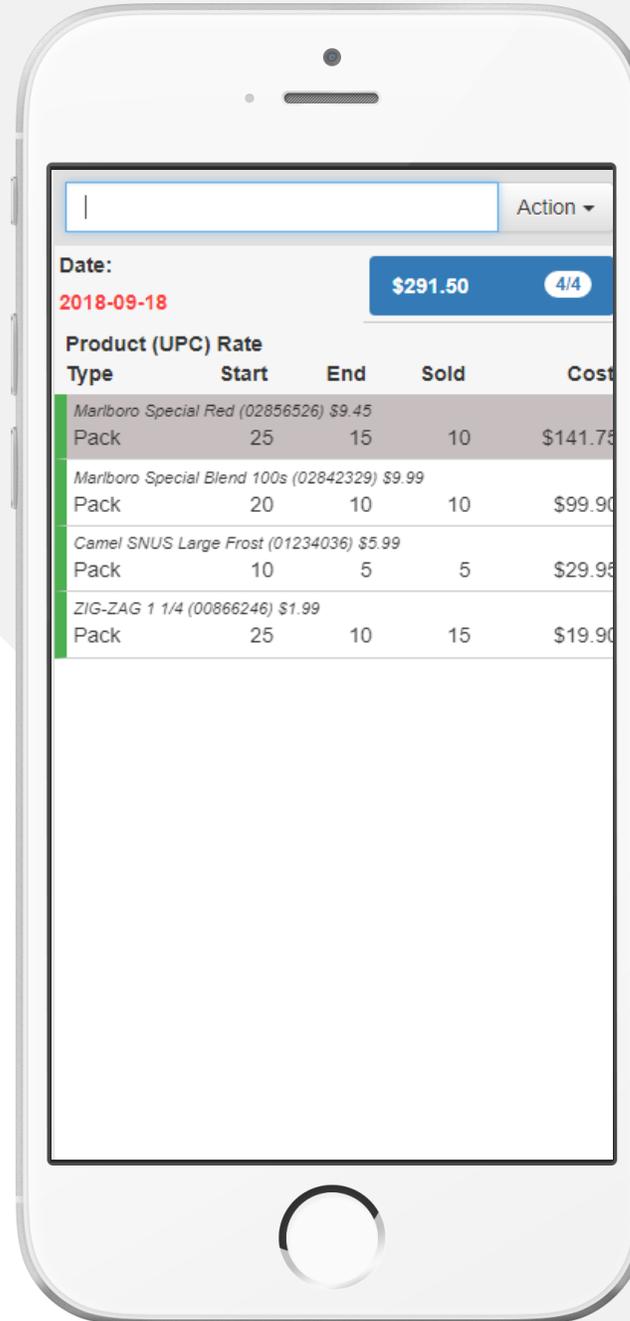

Product Quantity

If product information exists for your business each day user will be presented with the quantity screen. If you receive your order please enter order quantity to adjust qty in the system for that day. Going forward only this number required to enter.
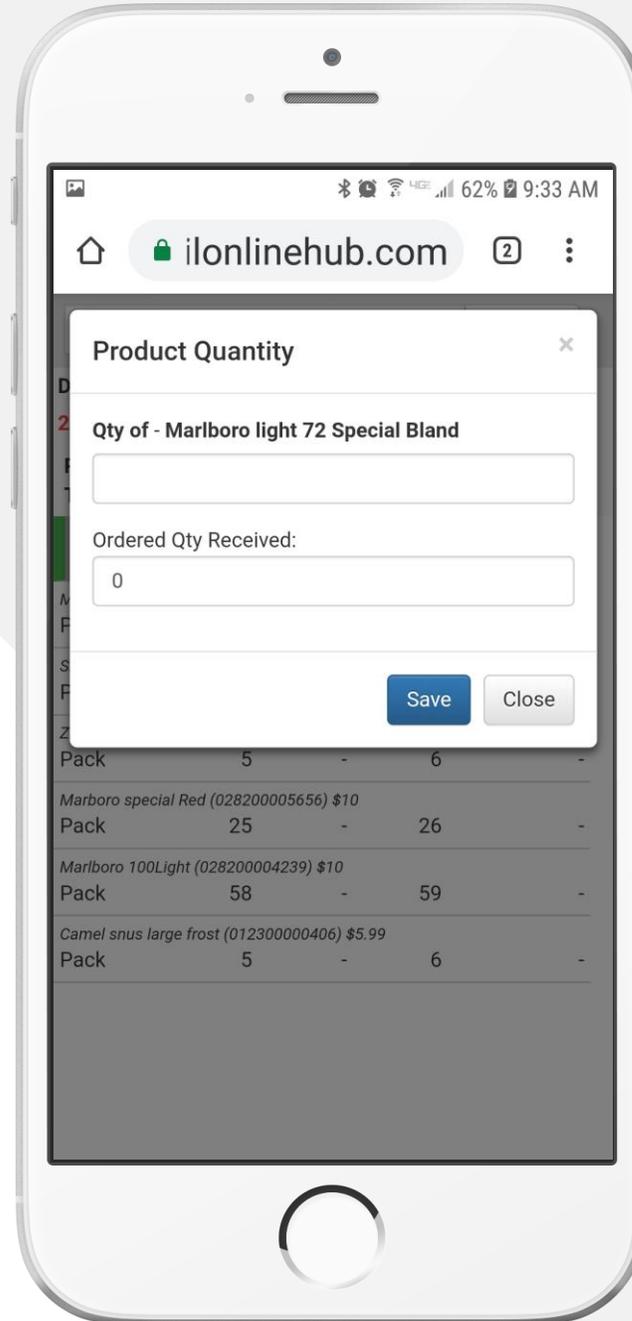

Product Quantity Indicates

Once you enter the quantity for scanned product item will be added to list and Green bar indicating you have completed entry for a product for visual indication. Also, in the Blue bar above item list will indicate how many items you have completed out of your total items i.e. (If the business is tracking 10 items and completed 4 items for the day bubble will display 4/10) and also indicates the current cost of these products.
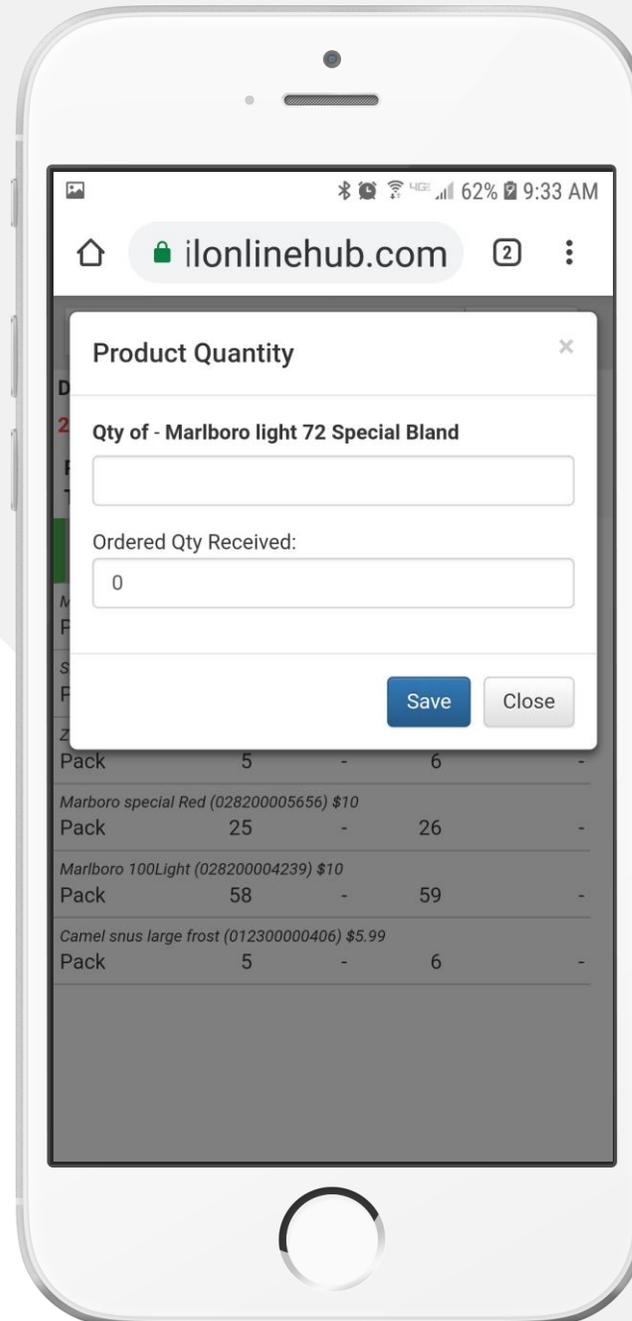

Next Day

Next day onwards upon launching application user will see this screen which indicates there are 4 items to track and inventory quantity exists for those products the previous day.
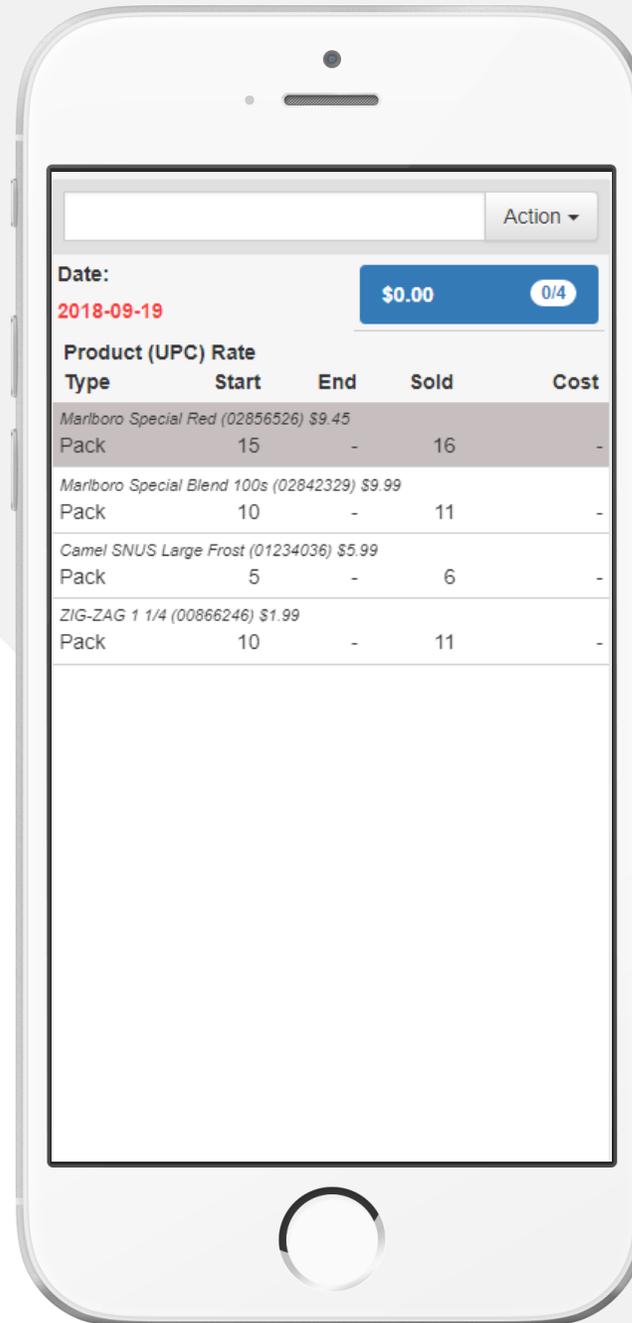

Quantity Planning

Enter quantity for the scanned product. This is the only step will require to repeat for each product business is planning to track.
